TKA Construction

For over 20 years TKA Construction has provided design, sales, installation and service to the pneumatic tube industry. Located in Northern New Jersey, our service area includes the New York Tri-State region along with Eastern Pennsylvania and Western Massachusetts. We service a wide variety of industries including hospitals, casinos, retail stores, car dealerships, recycling plants, stone quarries, distribution warehouses and a wide range of additional applications where the installation of a system improves work flow while freeing up employees to concentrate on other tasks.

We service and install one way and bi-directional point-to-point systems, semi-automatic and fully computerized systems using either steel or PVC as transmission tubing. Our most common sizes are 3, 4 and 6 inch. We have a wealth of installation experience in new construction, retrofitting existing facilities, relocating installed systems and underground installations.

Our service menu includes: the repair of older models, on-site rebuilding, service on demand, emergency night and weekend service. We can also customize a preventive maintenance contract to fit a client's specific needs.

We are the certified Northeast Dealers for both the Air Link and Pevco lines of pneumatic tube systems.
